Aqua Smart System

We are very pleased to introduce the newest, most up-to-date technology we have to offer. **Aqua Smart System** is an intelligent program for robotic pool cleaners that aids the cleaner to fully cover and efficiently clean any medium size Commercial swimming pool in approximately **four hours**. Prior to the Aqua Smart System, all robotic cleaners functioned randomly, lacking a systematic cleaning pattern, and ultimately requiring an excessive 6 to 8 hours to thoroughly clean an entire pool.

Our robots equipped with the **Aqua Smart System** have a very smart mathematical algorithm installed in the brain of the machine enabling the robot to cover the pool bottom and walls in a systemized fashion and without wasting time. Extensive research, testing, and customer feedback supports our claim: we can clean any standard commercial swimming pool, regardless of shape, in **four hours or less**.

This technology yields many advantages:

1. Rapid Cleaning
2. Saved Energy
3. Extended life of the mechanical parts and consequently extended warranty from the manufacturer.

Patent pending
